

# The NEW HIROBO 1/10th 4WD

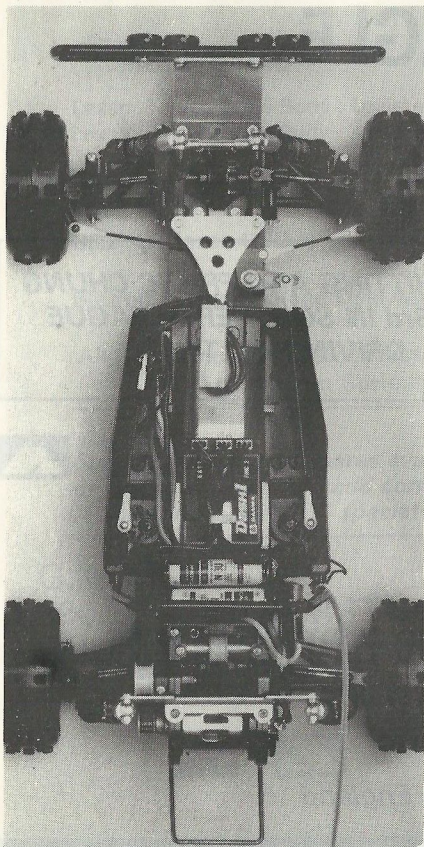

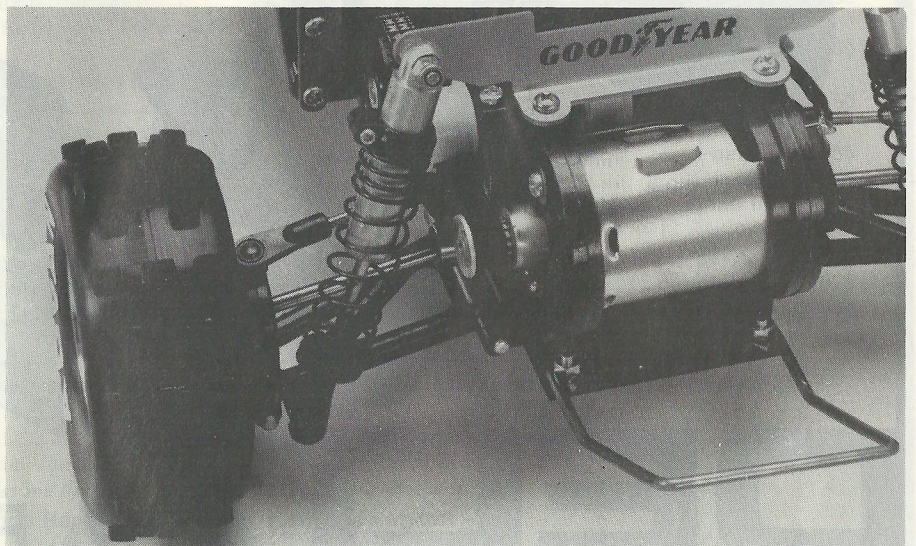

This latest offering from Hirobo, who are probably better known for their superb range of R/C Helicopters, is bound to cause quite a stir around the circuits.

Sporting all independent suspensions, coil over shocks springing and 4 wheel drive via a belt drive it has an excellent specification.

With many of the parts made from glass reinforced plastic they offer not only very light weight but also a high resistance to the inevitable 'shunt'. Comber and castor angle can be adjusted to allow drivers to 'dial' in their car for any type of surface.

A two stage speed reduction and belt drives no less than two differentials fore and aft. The belt is protected from the elements by a removable centre spine.

All four wheels have large heavy duty oil filled dampers with adjustable spring tension.

Radio and battery are housed in a waterproof (well thats what they say) and dirt proof box that sits on top of the chassis.

All in all a very interesting all terrain vehicle and one that RRC will soon be reviewing.

Anyone who would like more details of the car named by the way 'Rock'n City 44B!' should contact, Dave Nieman Models, 34 Watford Road, Sudbury, London, Tel 01 904 6879 who are the importer/distributors of Hirobo products.
