

**KYOSHO**

# MINI COOPER

*Rolling chassis.*

The Kyosho Mini Cooper is a beautifully detailed 1/10 scale model of a very classic car from the 1960s. The chassis is of a plastic 'ladder' type design incorporating a standard mechanical speed controller, geared differential, independent front wishbone type suspension and a polycarbonate bodyshell.

Powered by a 540 motor and 7.2 volt battery, this model certainly doesn't

hang about, and it actually handles remarkably well despite its basic design. The polycarbonate bodyshell is complemented by several nicely moulded 'chrome' bits like the radiator grill, bumpers and lights.

If you want a model car that has all of the character of its big brother, the Mini Cooper from Kyosho is for you.

Available from your nearest Kyosho stockist.
