Germany's Christian Keil who was placed fifth overall.

TRC driver Dave Hechler placed eighth with his Trinity powered car.

Right, the British Team L. to R. Andy Dobson, Tim Walden (Team Manager), Tim Dakin, Mat Ford and Phil Davies.

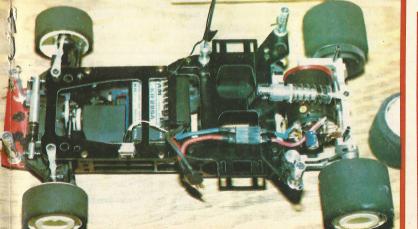

Centre right, this beautifully made car which had independent front suspension and an ingenious rear damping system, was part of the OCT Team.

BREAKFAST LUNCH INCLUDES DINNER DEVERAGE

Eustace Moore (Mr M.I.P) keeping up date with R.R.C.

Mike Toby (Mr CRP) Left and Gary Kyes from the Ranch Pit Shop threw the caterers into disarray when they rearranged the menu board!

Mike Lavacot receiving support and encouragement from Gene Hustings who worked untiringly around the Associated pits.

New modified motor very nicely made using alloy end bell from "Big" Jim Greenmeyer of Team Check Point.

The pits in the background with the drivers rostrum on the left. Note the hairpin at the end on the straight which caused so many problems.

This was the third 1/12 scale IFMAR world championships, once again sponsored by Sanyo. This time there was no standard class, just six days of fast, modified racing.

This year it was U.S.A.'s turn to host the meeting again, which involved a trip to Las Vegas and the Tropicana Hotel, one of the biggest in Vegas. The worst part of the trip, without a doubt, was the 13 hours spent in the air, which meant that by the time Phil Davies and I had arrived at the hotel, and finally climbed into our respective beds we had been awake for nearly 25 hours.

The most amazing thing on arrival at Las Vegas happens as soon as you leave the aircraft, it's like walking behind a jet engine, or a big hot air gun, the heat just hits you

and it's like that all the time, which is not surprising considering Las Vegas is in the middle of the Nevada Desert.

Back at the hotel, the track had been laid out in one of the hotel's massive rooms on the ground floor, the carpet had been laid in the usual way and was fairly flat. The track itself was marked out with 3 x 6in. pieces of timber, nailed to the floor, and plastic tubing. It was one of the largest tracks I've ever seen, the rostrum was only five feet tall and really should have been twice the size, as you could only see the roll over mast of your car when it was on the far side of the circuit, and close to the track marker. There was plenty of pit space with ample mains supply, although of course it

was 110-volts which meant buying new charging equipment. There was an AMB automatic lap counting system in operation with the loop running over the track. This system was loaned to the race organisers by Bolink who import the AMB equipment into the United States. Another good idea was the score board which was linked to the counting system, constantly showing the top three cars in each race and race duration, this made following a race very easy for spectators.

Everything started on Monday with registration, followed by a strict radio check to make sure radios were all giving a nice clean signal, and the correct number of cells were being used. Open practice was then

The two motor men Mike Reedy and Trinity's Ernie Provetti enjoying some of the camarderie that exists in R/C car racing

Note how Andy Dobson has "hardwired" his steering servo for increased reliability.

Bob Light who finished sixth driving a T.R.C. Pro 12.

Junichi Koma from the Japanese team enjoys a moment to relax.

The Aussie Team L to R: Jonathon Borthwick (he also writes for the Australian mag Airborne) Craig Bowring and Barry Corfe, All drove Associated cars.

allowed until 9.00 at night, which for a change was not too bad.

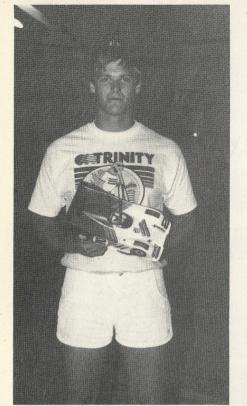

Tuesday, and controlled practice started at 8.00 in the morning. Practice was held in your heat, there were 15 heats altogether with eight cars in each, which didn't seem too bad at the time. All heats had been graded and split into two groups, A and B, or heat 1 to 8 and 9 to 15. Heats 7 and 8, 14 and 15 being the top four without a doubt. By this time the grip had really started to come up, and keeping the car on four wheels was becoming a problem, the carpet had also started moulting with the result that, at the end of a race the car's bearings had almost seized, this made sure of a strip down after every run. Controlled practice finished at 6.00pm, open practice continued until 9.00pm.

Wednesday, 8.00am saw the start of qualifying, heats 1 to 8 being run in the morning with 9 to 15 following in the afternoon. Although only eight cars were in each race, the hairpin at the end of the starting straight was causing real problems at every start. At the end of the day it was clear to see that 29 laps would be needed to make the world final. This is how the top ten stood after the first day's qualifying.

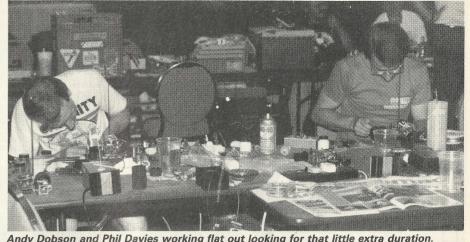

1 Tony Neisinger	29:8:13.8
2 Bob Light	29:8:15.9
3 Mike Lavacot	29:8:18.7
4 Christian Keil	29:8:20.0

5	Andy Dobson	29:8:20.4
6	Jerry Case	29:8:20.7
7	Joel Johnson	29:8:23.6
8	Masawi Hiorosaka	29:8:25.8
9	Ralph Burch	28:8:00.2
	Kent Clausen	28:8:01.2

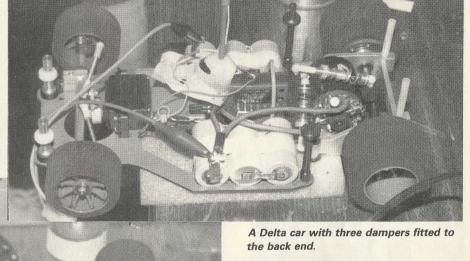

Thursday saw another three rounds of qualifying starting again at 8.00am with group B first followed by group A in the afternoon, times started to get quicker and quicker, although a clean start through the first hairpin was still the main problem. With everyone on 29 laps, it was the time of your last lap after eight minutes that counted, if you dumped badly your time would be too slow for the final.

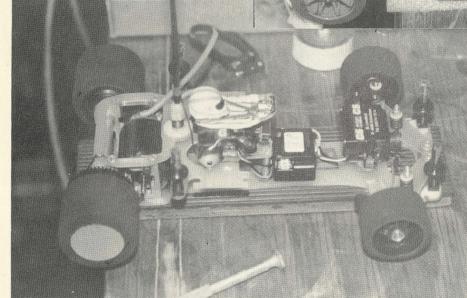

Placed second Joel Johnson proved to be a hard man to beat.

Andy Dobson and Phil Davies working flat out looking for that little extra duration.

Top placed Schumacher car driven by Andy Dobson.

1	Mike Lavacot	29	8.06.6
2	Bud Bartos	29	8.08.6
3	Christian Keil	29	8.12.2
4	Tony Neisinger	29	8.13.8
5	Kent Clausen	29	8.14.3
6	Jose Rosas	29	8.14.7
7	Bob Light	29	8.15.9
8	Hiroyuki Matsumoto	29	8.16.5
9	Masawi Hiorosaka	29	8.16.6
10	Andy. Dobson	29	8.20.4

Friday was the day, a last chance to qualify with three rounds of heats this time run straight through 1-15. The atmosphere was amazing and the pressure was really on with drivers going quicker with every run. After the first round there were no Brits in

the final, but the second round saw me turn 29-8.09.1 to jump into fourth spot, this still left Phil Davies in fourteenth, Mat Ford in sixteenth and Tim Dakin twenty seventh. The last round was amazing and the highlight of the week's racing, with drivers having the race of a lifetime, trying to qualify. Phil Davies in heat 14 final got it all together despite a not quite perfect start, turning the quickest lap time of the week and at eight minutes was still going like a train, turning 29-8.01.1 to take top spot, quite an amazing

So on the last heat, which saw Tony Neisinger get a perfect start and storm away to drive another great race to turn a time

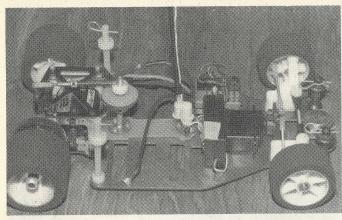

Bud Bartos finished 10th he now races under the TRC banner as an independent

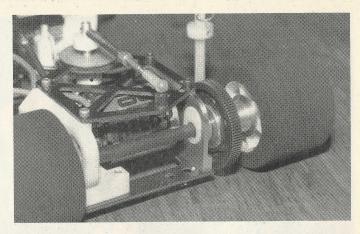

of 29 8.00.7, just pipping Phil Davies by half a second. So that was it the final was decided and looked something like this.

1	Tony Neisinger, USA	29	8.00.7
2	Phil Davies, Eng	29	8.01.1
3	Joel Johnson, USA	29	8.06.5
4	Mike Lavacot, USA	29	8.06.6
5	Bud Bartos, USA	29	8.08.6
6	Andy Dobson , G.B.	29	8.09.1
7	Jose Rosas, Fra	29	8.09.9
8	Dave Hechler, USA	29	8.11.5
9	Christian Keil, Ger	29	8.12.2
10	Bob Light, USA	29 8	3.112.2

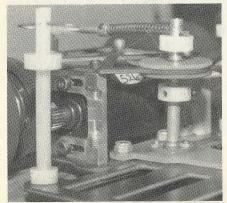

Saturday saw one round of controlled practice, run in final's format. The A final

## ath WORLD CHAMPS...1/12th WORLD CHAMPS...1/12th WO

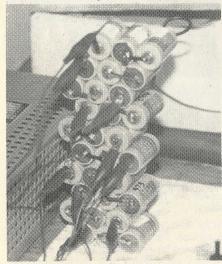

Below, above, left and right: The new Associated RC 12L really did handle well. Many drivers didn't even have their car until the race as the factory has been really hard pressed. The centre post design works well and provides a degree of damping, nice alloy motor mount provides both rigidity and acts as a heat sink. Note the R.P.S. Team Losi fine pitch gears that were widely used. Saddle mounted cells seems to be the way most cars are going.

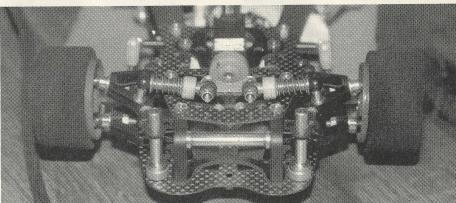

How's this for "high rise charging"

would be run three times, the best two scores were to count. The remaining finals would be run twice with the best score to count.

The first Brit on was Tim Dakin who drove really well to finish seventh in the D final. Young Mat Ford was next, driving another great race to finish third in the B final with an overall place of thirteenth in the world. The first A main was the worst race of the week with some very untidy racing, the two referees watching were not much use. Joel Johnson got the start and led all the way

One of the independent Japanese cars.

At the end of the meeting, the banquet gave an opportunity for drivers from many countries to get together, here the Americans hosted Australians, and the Danish.

The ten fastest 1/12 drivers in the world, at the start of the final

to the finish, with Christian Kiel second, Mike Lavacot third and Andy Dobson, that's me, the only drivers on 29 laps. The second final was a much better race with Lavacot getting away chased hard by Neisinger and yours truly, after five minutes I passed Neisinger then Lavacot to lead all the way home, result Dobson, Neisinger, Lavacot, Johnson and Hechler in fifth. So going into the last race any one of four drivers were favourite, Johnson, Dobson, Lavacot and Neisinger. It was all about the start, and Neisinger got it chased hard by Phil Davies which is the way it finished, Lavacot was third, Bob Light fourth and Joel Johnson

fifth. I finished in seventh.

It was going to be close on times but in the end Tony Neisinger had done enough, again, Joel Johnson was second, third turned out to be a really close thing between Mike Lavacot and myself, having to go to our third time to decide things. Mike's was better so that was that.

The racing had set new, higher levels but the organisation at times was very poor for such an event and result sheets were very hard to come by. It was only due to Mike Reedy, who wrote all the results by hand on Saturday night that we had any at all, so many many thanks to Mike.
